A CONTRIBUTION TO THE IOTA DIRECTORY OF ISLANDS
THE IOTA STATUS OF THE IIA ISLANDS
by
Mauro Pregliasco, I1JQJ
IOTA Country Assistant (Italy)

The survey concerning the IOTA status of the IIA islands was presented for the first time at the HF DX & IOTA Convention in Bologna (13-15 October 1995). The following is the latest version, which considers both the changes made to the IIA List of the Islands (new Reference numbers, corrections and integrations) and the results of further IOTA researches.

The IIA list has developed during the years by "subsequent stratifications". The peculiar structure of IIA aims at a comprehensive view of the situation and issues the Reference Numbers also to islands that have not been activated yet and that are known only indirectly, through different sources (maps, nautical charts, pilots, publications of various kinds). The lack of homogeneity of those sources may give rise to confusions or doubts when trying to identify for a certainty the location, and therefore the IOTA status, of the several smaller islands, whether already activated or not: just think of the homonimies, to the double or even triple names, to the difficulty in identifying the reference eponyms to which it has been unavoidable to resort, to interpret dubious and misleading names and attributions.

In addition to these problems, which are referable to the specific nature of IIA, there are often other problems, mostly springing from my lack of suitable means of determining whether some islands qualify under the IOTA rules.

Consequently this survey, though carried off with great care, does not claim to be decisive, as well as the decisions, taken according to the evidence at my current disposal, do not claim to be final. Therefore whoever thinks that mistakes have been made, both in ackowledging and witholding the IOTA validity to an IIA island, is requested to express his comments and produce the supporting evidence. In the same way, I shall welcome anyone who, provided with the supporting evidence, can convert into a final Y(es) or N(o) the many "question marks" to which, failing sufficiently detailed maps or reliable information, I have been forced to resort.

The 612 islands included in the current IIA list are listed alphanumerically by Reference Number (column 1). The name of the island (column 2) is followed by the IIA group the island concerned belongs to (column 3). Column 4 and column 5 state whether the island meets (Y) or does not meet (N) the two basic IOTA rules. A question mark (?) indicates an uncertainty or an impossibility to draw a conclusion: these conditions are from time to time due to the poor readibility of the maps, to the lack of sufficiently detailed maps or of indisputable information. Column 6 states whether the island qualifies for IOTA or not: in the affirmative, it mentions the appropriate IOTA Reference Number (EU-... or AF-...). Further comments or information, if necessary, have been arranged as notes.
