CY0S ---> "A lot of DXers have inquired about Sable Island after Hurricane Fiona made an almost direct hit on the island", the CY0S team posted to the DXpedition's website on 5 October. "Hurricane Fiona had the lowest barometric pressure (931 mb.) ever recorded in Canada during any previous hurricane. Fortunately, the news is better than expected on Sable Island. Parks Canada personnel on the island report some of the buildings lost sections of siding and some roof damage. The Parks Canada personnel described the damage as superficial. The NavCan METAR (Meteorological Terminal Air Report) system was inoperative for 5-6 days until technicians could travel to the island to restore the system. The hurricane caused some erosion and reshaped part of the island. A researcher who has been on the island for almost 50 years reported it was the worst storm she has ever experienced on the island".
