CLUB LOG ---> Club Log ([www.clublog.org](http://www.clublog.org)) is a web-based application that uses a large database to analyse amateur radio log files uploaded by users all over the world. It offers band-mode league tables, efficient log search tools, analysis for DXpedition planning purposes and most wanted lists for DXCC entities (including by date, band or mode for example). Club Log can provide empirical propagation charts, and give back to its users the ability to find "wanted" DX spots, identify QSLing gaps and perform other analysis of their logs which might be hard to do with normal logging software.

As of 5 March 2010 there were 3,030 callsigns registered in Club Log and 23,298,182 log entries available for analysis, but some continents are still under-represented - please help balance the database in order to make reports and statistics more meaningful and representative.
