The team will meet in Suva (Fiji) on 22 September and depart for Rotuma on the 25th. They expect to be QRV on 27 September and to complete the DXpedition on 7 October. 3D2R will be active on 160-10 metres CW, SSB, RTTY, PSK and SSTV, plus 6 and 2m EME, with a focus on Europe and Africa when propagation permits. QSL via YT1AD and LoTW (logs to be uploaded some six months after the expedition). Further information - including log search (to be updated on a daily basis), suggested frequencies and details on how contribute to this expensive project - can be found at www.yt1ad.info/3d2r/index.html

4J - The Federation of Radio Sports of Azerbaijan and the Safari DX Activators Club are organizing an expedition to take place from Nagorno Karabakh from 30 September to 2 October. The team will operate as 4K3K, 4J0K and 4J0SFR. [TNX 4J5T]

4W - The bulk of the equipment, including the linear amplifiers, the Titanex V160E vertical, Hexbeam and other antennas, left Darwin, Australia, on 6 September. It has all arrived safely in Dili, Timor-Leste, and is now awaiting the arrival of the 4W6A team next week. Due to a late change of airline timetable, 9M6DXX and 9M6XRO will not now arrive in Dili before the afternoon of 16 September. The chartered boat taking the team and the equipment to Atauro Island has therefore been rescheduled to later that afternoon. It is likely that only one or two stations will be on the air that day, as the team will run out of daylight before all the antennas can be erected. The remainder of the antenna work will commence at first light the following morning (approximately 21.15 UTC on 16 September) and 4W6A should be fully operational by the morning (UTC) of 17 September. 4W6A will be QRV on all bands 10 to 160 metres, using CW, SSB and RTTY with up to four stations simultaneously. Col, MMONDX, is the pilot for 4W6A and is responsible for providing feedback to the team. He may be contacted at dxer59@gmail.com. QSL via MOURX direct or bureau (<http://m0urx.com/oqrs>). T32 - The T32C expedition to Christmas Island "has hit some logistical problems", G3XTT reported on 16 September. The container "with its 6 tonnes of kit got as far as T30 (Tarawa), but onward shipping to T32 has proved impossible, despite our best efforts and promises from those involved in 3D2, T30 and T32. The ship that was due to bring our container from Tarawa has broken down and is being towed to Fiji for repairs". The team will go ahead anyway. They will have "ten FT-450D radios, which we will hand carry to T32, along with several lightweight linears. We will also take enough hardware to set up verticals and vertical arrays for all bands 160 through 10. It may even be possible to run multiple stations on some bands, though not to the extent that we had previously planned. All our computer equipment was to be hand-carried in any case, so daily log updates to ClubLog will be unaffected. Unfortunately, unless our container makes an unlikely late arrival on the island, 6m EME will have to be abandoned, and we will not have the 4-square arrays for 30 and 40. But we will do our best to set up phased systems or other antenna Configurations to achieve gain, especially towards Europe where we will continue to focus our efforts". The expedition dates (28 September-26 October) are unaffected, "but we cannot realistically expect to have stations running on nine bands by the first weekend, though we will aim to be on some bands, at least. As we will not have everything pre-kitted, there will be a lot of building and configuration work to do once we arrive at Christmas". Check the expedition's website (www.t32c.com) for updates on the latest happenings and for interacting with the team once they start

operations - "your feedback will be especially important so that we can maximise every band opening".

T5 - Murat, TA1AMC ("a member of the Turkish Ministry of Health's National Medical Rescue Team") is active in his spare time as T5/TA1AMC from Mogadishu, Somalia.
