DESECHEO 2026 ---> KP5/NP3VI (<https://desecheo2026.com/kp5>) has been QRV since 12 January, shortly after the Deployment Team successfully installed both Remote Deployment Units on the island. These RDUs are purpose-built, self-contained radio systems engineered specifically for challenging and environmentally sensitive locations such as Desecheo.

There are no on-site operators, and the two stations are being operated remotely. During the planned 30-day window, operators will utilise standard FT8 (MSHV), CW and SSB. The output power is dynamically managed based on battery levels, with a maximum capability of 100 watts.

The primary goal of this operation is to provide an All Time New One (ATNO) to as many people as possible. As of 10 UTC on 16 January, 9340 QSOs had been made with 3663 unique calls. QSOs are live-streamed on Club Log and uploaded almost instantly to LoTW. Paper QSL cards are available via M00X0's OQRS.
